

SMART SWITCHING

For Smarter Automation

FLEXIBILITY FIRST

One robot. Multiple tools. Switch tasks instantly – no reprogramming, no manual work. Maximize uptime with minimal effort, using tool changers you can rely on!

LOCKED WITH CONFIDENCE

RSP's unique locking system, TrueConnect™, delivers fast, secure, and repeatable tool changes with zero play, full reliability – and a lifetime warranty.

BUILT FOR AUTOMATION

From compact cobot setups to heavy-duty industrial robots, we offer tool changers that integrate seamlessly with any system, providing flexible and versatile applications.

ONE ROBOT, MANY TASKS

Don't limit your robot to one task. A tool changer opens up new levels of flexibility and makes your robot ready for more – faster changeovers, less downtime, and smarter automation.

With a tool changer from RSP, your robot becomes a multi-skilled performer. Whether it's welding, gripping, or part handling, switching tools takes seconds – not minutes. Our patented TrueConnect™ locking mechanism ensures secure, repeatable changes, while options for media transfer keep everything connected. Choose manual or automatic, compact or modular – every system is designed for uptime and performance. Upgrade your robot. Upgrade your productivity.

COBOSHIFT

CoboShift is a tool changer developed specifically for collaborative robots. With both manual and automatic versions available, it enables quick and repeatable tool changes without the need for extra wiring or complex programming. Compact, safe, and easy to install, CoboShift is perfect for increasing flexibility and reducing downtime in cobot applications – making your collaborative robot even more capable.

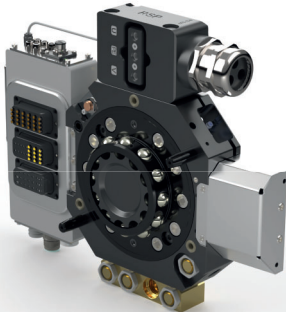

COMPACT

The Compact series offers tool changers with a low-profile, integrated design where all functions are built into the changer body. Available for robots with payloads up to 1000 kg, this family combines robust construction with RSP's patented TrueConnect™ locking mechanism. Compact is ideal where space is limited, and performance can't be compromised – enabling fast, secure, and precise tool changes across a wide range of applications.

MODULAR

The Modular series is designed for maximum adaptability. With interchangeable media modules for air, electricity, signals, and more, you can tailor the tool changer to your specific needs. Suitable for a wide range of robot sizes and applications, Modular delivers high locking force, precision, and versatility. Combined with the TrueConnect™ system, it's a future-proof solution for automated production.

MODUFLEX

Moduflex is a modular tool changer built for large robots and heavy-duty applications. With support for multiple media types and high payloads, it's ideal for industries like automotive manufacturing. Featuring a patented safety system and continuous process monitoring, Moduflex ensures secure, reliable tool changes even in the most demanding environments. Designed to handle both complexity and scale – without compromise.

HOLLOW-WRIST

Our hollow-wrist tool changers are optimized for robots with internal dressing (ID). By routing media such as air, signals, and power through the robot wrist, the solution minimizes external hose movement and extends the life of the hose package. Compact and robust, the hollow-wrist series ensures full motion range and reliable performance – even in applications with complex, repetitive movements.

WE ARE ROBOT SYSTEM PRODUCTS

RSP stands at the forefront of the industrial automation industry as a renowned global leader in delivering cutting-edge solutions for enhancing the performance and versatility of industrial robots. Our cutting-edge solutions empower you to optimize your robotic systems for maximum performance and efficiency, positioning you at the forefront of modern manufacturing.
